

**SEIFSA CONFERENCE 2026 – POWERING INDUSTRIALISATION
RELIABILITY | AFFORDABILITY | SUSTAINABILITY**

Venue: Emperors Palace, Kempton Park

Date: Thursday 11 June 2026

Energy has become the single most important determinant of South Africa's industrial competitiveness. For the metals and engineering sector, the backbone of South Africa's industrial base, the reliability, affordability and long-term sustainability of the energy supply industry (ESI) directly shape investment decisions, production capacity and employment. The development of the infrastructure of the ESI is also a critical demand anchor for the metals and engineering sector.

This Conference brings together leaders from government, regulators, energy producers, financiers and industry to engage on the practical issues that matter most to manufacturers: restoring system reliability, improving tariff predictability, expanding transmission infrastructure and strengthening municipal performance.
